Application/Control Number: 10/776,135

Art Unit: 3747

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5, 7 and 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sugimoto ('129) in view of Majima.

Sugimoto teaches all of the limitations of these claims but does not specifically talk about concentrations and rinsing volume flow. Sugimoto includes a variable throttle valve (50) (see Claims 1 and 2) and a pressure sensor within the system. It would have been obvious to open the inlet valve more for high concentrations in order to properly rinse the canister.

Majima teaches that a variable vapor-concentration rinsing flow can be created by using a variable atmospheric inlet flow into the canister.

It would have been obvious to modify Sugimoto by considering vapor concentrations as taught by Majima since the former reference teaches monitoring various engine parameters but simply does not mention concentrations. Finally, Sugimoto teaches closing the vent value during a trust operation.

Claims 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sugimoto and Majimo as applied to Claim1 above, and further in view of Hyodo.

Hyodo teaches a check valve (54) used to control flow into a canister. It would have been obvious to bias the valve to open with vacuum at the canister outlet and to

Application/Control Number: 10/776,135 Page 3

Art Unit: 3747

close the valve using the solenoid, thereby making this type of valve operation obvious to use in regulating the flow into Sugimoto.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carl S. Miller whose telephone number is 571-272-4849. The examiner can normally be reached on MTWTHF.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Yuen, can be reached at 571-272-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
